REASONS FOR ALLOWANCE

The prior art does not teach or suggest a method of making an emulsified absorption base comprising heating white petrolatum up to 80°C, adding methyl glucose dioleate and mixing the two components together to form an absorption base and diluting the absorption base with water preheated to up to 50°C.

The closest prior art is Narula (US Patent 4,788,001) in view of McAtee (US Patent 6,153,208). Narula teaches methods of making oil-in-water emulsions that are comprised of petrolatum and are diluted with water. Narula does not teach heating the petrolatum up to 80°C, diluting the emulsion with water preheating up to 50°C, the addition of a preservative system or the addition of hydrocortisone. McAtee teaches methods of making compositions with petrolatum and methyl glucose dioleate as the emulsifier. Active ingredients include hydrocortisone and the ingredients are mixed at between 75-115 °C. However, there is no specific teaching by Narula of using methyl

glucose dioleate and there is no teaching of what the HLB value of dimethyl glucose dioleate is or any other factual basis for selecting it to form an oil-in-water emulsion. There is no rationale from the teachings of McAtee to pick dimethyl glucose dioleate from the myriad of emulsifiers disclosed in the reference.
